

### Card Payments

#### TECHNOLOGIES

HTML5, Bootstrap

---

ASP.NET MVC

---

.NET, C#, REST API

---

Active Directory

Context were tasked to develop a secure PCI compliant credit card payment intranet.

The system communicates with the MasterCard payment gateway platform. All payments are processed via tokens with no sensitive card details being stored.

User access and authentication is achieved through full integration with Microsoft Active Directory.

Additionally, a REST based service layer was developed to allow a Dynamics CRM system to hook into the card payment system.
